

PBB registry has been working alongside AngusNZ to update and regulate the rules around calf registrations. Below are the important points you need to know prior to submitting your calf entries.

Important

- Calf registration forms are for calves born between 1st January 2023 - 31st December 2023. The year number for 2023 born calves is '23'
- Cut-off date for calf registrations is 31st May 2024
- Ensure your sires are DNA tested with a SNP profile, sire verification and are genetic tested*
- All dams born 2018 and onwards are sire verified

How do you currently submit your calf entries? Take a look at the below options and get in touch with the registry team if you want advice.

- Internet Solutions via 'LOGIN' on the top right corner of the AngusNZ website
- Livestock Management Software
- Pre-populated registration form on request (Registry can email this)

*For sires born before 01/01/2019, they can be free untested of all genetic conditions.

*AngusNZ encourage members to take the chance to also Dam Verify their animals at no extra cost as Full Parentage is included in the AngusGS testing through Neogen/PBB.

Get Ahead

How about getting ahead for 2023 and make sure your chosen sire/s, whether that be for natural or AI mating, have been sire verified and tested for genetic conditions. This will make it easier to sire verify and register your 2023 born calves.

If you have any difficulties when completing your calf registrations, please contact Registry.
